Abstract (en)
[origin: US4587151A] The mobile binding consists of two sheets (1 and 2) of cardboard, or similar semi-rigid material, which extend over the whole length of the binding and which are stuck to each other, except at least in the end portions of the spine, and an opening (8) is provided in the inner sheet of cardboard, perpendicular to each of these end portions. The elements holding the magazines consist of clips (9) substantially in a S-form one (9a) of whose end branches is designed to be inserted into the middle of a magazine to be bound (10); the other end branch (9b) is designed to be inserted through one of the openings (8) of the inner sheet of the spine. Each clip (9) is in molded plastic, its central branch (9c) being extended to beyond the portion (9e) where it connects to the first end of branch (9b), by an overlay (9d) in the immediate proximity to the inner sheet.
