Abstract (en)
[origin: EP0134368A1] 1. A practice shell, of the spin-stabilized type, fired at a reduced range compared with the longer range of a combat shell of the same caliber, including at least one cavity (22) generated by revolution, intended to adjust its weight to that of the corresponding combat shell, characterized in that it includes spin-destabilization means intended to give it a dispersion in range and direction at least equal to the one which the corresponding combat shell would have at a longer range, the destabilization means consisting of an unbalancing mass obtained by means of a parallel or angular offset of the longitudinal axis y'y of the cavity with respect to the longitudinal axis x'x of the shell.
