Abstract (en)
[origin: EP0134876A1] A support for bracing the borders of gussets to be stitched during mfr. of a pair of stocking tights features a vertical pipe (2) located coaxially beneath a head (4) supporting the upper part of the tight, the pipe can draw in the legs (36) of the tights by suction and clamp them (22). The tube (2) can move vertically and includes a coaxial tube (21) which can rise and project sufficiently to enter the mouth (40) of the head (4) to invert and clamp part of the body of the tights. A combination of a 'V' shaped yoke (3) and a sickle-shaped lever (5) on a pivot are used to move the dangling legs of the suspended tights over the mouth of the tube (2) to gather in the dangling legs (36).
