Abstract (en)

A sea-going self-propelled vessel (10) can load and transport prefabricated offshore structures (43) on a main deck (14) thereof. A raised deck (22) on one end portion and one or more stabilization tanks (34) on the other end portion of the vessel (10) are provided to afford stability for submergence of the main deck (14) for loading of an offshore structure. The stabilization tanks (34) are portable so that they may be removed for loading of a large prefabricated offshore structure from a fabrication yard.
