Abstract (en)

[origin: EP0135812A2] The protective helmet has a swivellable visor (4) which has a transparent pane (5), arranged on a visor frame (6), and covers a viewing aperture, ventilation apertures (14) being provided in the region of the vision aperture. In a protective helmet of this type, a low-cost design is to be provided which optimally fulfils the contradictory requirements of a high degree of comfort for the wearer and a sufficient ventilation which is largely independent of the specific driving situation. This is achieved in that the ventilation apertures (14) are arranged in the visor (4) in the region above the top edge (9) of the viewing aperture. <IMAGE>
