Abstract (en)
[origin: EP0136561A2] A driving circuit for driving a piezoelectric bi-morph (1) constituted by joining a pair of piezoelectric elements (1a, 1b) so that their polarization axes are directed in directions opposite to each other. The driving circuit includes a driving power source (4), a first switch portion (3) through which a common junction (1c) of the pair of piezoelectric elements (1a, 1b) is connected to one side of the driving power source (4), with the other terminal (1d) of one piezoelectric element (1a) being connected to the other side of the driving power source (4), and a second switch portion (5) to which the other terminal (1e) of the other piezoelectric element (1b) is connected.
