Abstract (en)

[origin: EP0136766A2] The claim refers to a knitted-fabric supply container for a cushion covering machine. The container comprises a gate-shaped support and two tubular, curved arms connected. One arm is firmly fixed, the other can be moved up and down by power means. The free ends are curved, has a downward bend and has an upward bend. They pass each other in such a way that - in the lower position- they can pass through. In this position they are inclined towards one another, in the position where they are apart they face away. In the lower position a new fabric bundle can be pushed up whereas in the top position, the spread-out form presents a certain resistance to being pushed down.
