Abstract (en)
[origin: EP0137180A1] A heat-resisting aluminum alloy containing by weight: manganese from 6 to 8%, iron from 0.5 to 2%, zirconium from 0.03 to 0.5%, and copper from 2 to 5%, the balance being essentially aluminum. The aluminum alloy has mechanical properties, both at ordinary temperatures and at high temperatures and is also suitable for producing articles by the so-called atomization process.
