Abstract (en)

[origin: EP0137379A2] A heald-guide device for weaving looms is formed of at least one pair of round tubes (1,2; 11, 12), which are at least as long as the healds and which are connected, adjustable both in height and in depth, to the loom side structures (5) and positioned close to the middle point of the stroke of the upper part of the heads (3), bushes (8,9; 13,14) being mounted on the healds - coaxial to said tubes and free to rotate - in proximity of the appropriate conventional separators (7, 15) provided between each heald.
