Abstract (en)
[origin: EP0137466A2] 1. Device for constructing air passages for dammed or ventilated brickwork consisting of individual bricks (6, 7) with joints arranged in each case between adjacent bricks (6 and 7), a pipe-like square element being insertable in the plane of the wall of the brickwork as a substitute joint having openings (9), characterised in that the square element (1) comprises clamping straps (7, 8) arranged at right angles relative to the longitudinal axis and opposite to one another as a continuation of its upper and lower sides (2, 3) towards the lateral reception of bricks.
