Abstract (en)
[origin: EP0137997A2] 1. A plastic container, more particularly for condensed milk with a base (2), via which the container (1) can be filled, an upper sealing surface (20), in which an opening (20) can be made for pouring a liquid, with a holding member (15) which does not exceed the area of the container (1) formed by the base and which projects from the container casing which recedes with respect to the base and a pouring lip (9) which is disposed opposite the holding member (15) and projects from the container casing and does not exceed the container area, the upper side of which pouring lip passes into the upper sealing face (20) of the container, characterised in that the container has a lower portion (6) adjacent the base (2) and an upper part (7) recessed stepwise with respect thereto and that the holding member (15) and pouring lip seal radially with a respective peripheral surface (10 or 16) of the lower part (6), which passes continuously and without edges into the peripheral surface (11) of the lower part (6).
