Abstract (en)

[origin: EP0138168A2] The device has a pot-shaped housing (1) which has a cylindrical interior, can be sealed in a pressure-tight manner by a lid (3) and tightly encloses a number of bottles (11, 11') of the same diameter which adopt a regular arrangement. Rising pipes (12) which extend into the bottles (11, 11') as far as the bottoms and are connected to a dispenser tap (6) are provided on the lid (3). The bottles (11, 11') run without seals into the interior (20), and the entire interior (20) can be pressurised. <IMAGE>
