Abstract (en)

An integrated printer and paper feeding apparatus comprising paper storing means for storing a plurality of individual sheets of paper, paper feeding means for feeding individual sheets of paper from said paper storing means along a paper feed path, printing means for printing on a sheet of paper, paper advancing means for advancing a sheet of paper past said printing means to effect printing thereon, and control means for controlling the operation of said paper feeding means, said printing means and said paper advancing means, said integrated printer and paper feeding apparatus being characterized by a housing (4) for providing a substantially complete enclosure for said paper storing means, said paper feeding means, said printing means and said paper advancing means, each of said paper storing means (10, 12), said paper feeding means (156), said printing means (26) and said paper advancing means (28) being mounted within said housing such that said paper path along which said individual sheets of paper are moved lies completely within said housing. The present invention further comprises improved paper control means, improved envelope stripping means, and/or improved means for controlling the position of a sheet of paper to be printed on.
