Abstract (en)
[origin: EP0138640A1] 1. Warhead having a rotational symmetry about an axis, comprising an external cylindrical envelope (10) weakened and containing an external explosive charge (12) and an internal explosive charge (14) provided with a pyrotechnical detonation relay (18), characterized in that the internal explosive charge (14) has a cover (16) whose thickness is variable and decreases in the direction away from the relay (18) and is so constructed that the cover (16) strikes the external explosive charge (12) with a constant energy throughout its length upon energization of that explosive charge (14).
