Abstract (en)
[origin: EP0138770A2] 1. Flat sill for a door, comprising a sill profile (1) which can be put into a supporting floor (5) flush with the surface of the latter and has a hollow space (10) which is open at the top and also a cover profile (11) which can be inserted into the hollow space (10) of the sill profile (1) at a variable height and has a cover strip (12), the upper side of which has a visible surface or a contact surface (14) for the lower edge of the door leaf, and its underside, with marginal parts (14'), is intended for resting on a finished floor covering (9) separated along the sill profile (1), characterized in that the cover profile (11) has two legs (13) reaching into the hollow space (10) of the sill profile (1), the marginal parts (14') of the cover strip (12) of the cover profile (11) protruding laterally beyond the legs (13) in order to rest on the finished floor covering (9), and that a plurality of insert pieces (15) into which the legs (13) of the cover profile (11) can be engaged at a variable height are anchored in the hollow space (10) of the sill profile (1).
