Abstract (en)  
[origin: US4624371A] The security clothes-stand contains a number of holding rods (4) which are retained in a supporting device (3') and on the top end of which can be mounted a clothes-hanger (7) for receiving an article of clothing to be presented. The holding rods (4) essentially consist of a base tube (10) which is connected rigidly to the supporting device (3') and on which a casing tube (11) is rotatably mounted. The casing tube (11) carries at its top end a lock attachment (14) which contains a snap-in catch (15) designed for the releasable retention of the clothes-hanger (7). A holding member (7,5) of the clothes-hanger (7) can be inserted into a receiving orifice in the snap-in catch (15) and can be removed from the lock attachment (14) only after the catch (15) in the latter has been released.
