Abstract (en)

[origin: EP0139412A2] This invention is concerned with a Business Forms Assembly for use in hospitals and capable of recording details of medical test, for example a blood test. The assembly comprises a forms sheet and a bag capable of receiving a container containing a test sample and having closure means at the mouth of the bag to secure the container in the bag. The bag is secured to the forms sheet by adhesive. The business forms assembly is conveniently mounted on a retainer system comprising a continuous bar with a plurality of removable limbs with the lower limb passing through respective apertures in the assemblies.
