Abstract (en)  
[origin: ES281641U] A knotter for a chain for two yarn ends, e.g. in a spooling frame comprises a beak which is rotatable on a beak shaft and having a blade which can be opened and closed under the control of a slider plate mounted for vertical sliding movement on the front of a knotted housing. Behind this plate a transmission connected to the beak shaft also has a shaft carrying a cam which is rotated when an input shaft of the transmission is additionally displaced. The slider plate has a circular hole or edge which forms the control edge for the control end of the blade.
