Abstract (en)
[origin: EP0140104A2] The dispenser for pasty products, such as toothpaste, mustard or mayonnaise, has a cylindrical housing (1) for a piston which moves stepwise in the direction of the mouthpiece (2) provided at the one end of the housing, is penetrated by a piston rod and coupled via a clamping barrier, acting on one side, with the latter, on which piston rod a bent lever (H) engages which is spring-loaded in the restoring direction and is swivellable about a transverse axis (z-z). The one limb of said bent lever extends transversely to the longitudinal axis (y-y) of the dispenser and the other limb (b) forming an actuation handle extends parallel to the longitudinal axis of the housing. The dispenser also has a window-type aperture (20) in the casing wall of the housing for the penetration of the bent lever. To achieve a discharge operation which is simple in manufacture, favourable in allocation and free from risk, it is proposed that the window-type aperture (20) frames the lateral surfaces (s1 to S4) of the limb (b) extending parallel to the longitudinal axis (y-y) of the housing (1). <IMAGE>
