Abstract (en)

[origin: ES280925U] The invention relates to an enveloping or hooding stopper comprising a male piece constituted by a plate bordered by a skirt and comprising a teat at its center, on the same side as the skirt with respect to the plate. It further comprises a female piece or insert made of a material more malleable than that of the male piece, disposed on this teat and wedged by appropriate means between the teat, the plate and the skirt. The invention is particularly applicable in the bottling industry.
