Abstract (en)  
[origin: EP0140873A1] 1. A drilling arm with a bracket (2), an extension arm (4) pivoted thereon, which may be telescopic, which arm is displaceable via a lifting and lowering cylinder (5) and a swivelling cylinder (6), the extension arm (4) on its distal end, which may be rotatable about the longitudinal axis of the extension arm (4), supporting a pivot axis, mounted for example in a fork head (9), on which axis a support (11) pivotable by means of cylinders or the like is mounted, in which support a support shaft (14) is mounted so as to be arranged substantially normal to the pivot axis, which shaft supports the drill mounting holder (18) with a drill mounting device (19), a drilling device, and optionally an anchor setting device, characterised in that on the support shaft (14) an arm (15) is mounted, which has at its distal end a further shaft (17), which is connected to the mounting holder (18), the support shaft (14) and the further shaft (17) being arranged substantially parallel to one another.
