Abstract (en)

In combination for use as a propellant, a binder also acting as a reducing agent, a first oxidizing material containing lead and oxygen, and a second oxidizing material containing oxygen and a metal, the first and second oxidizing materials and the binder being provided in relative percentages by weight to obtain a reduction of the first oxidizing material to lead oxide, rather than lead, during the combustion of the propellant. A fuel additive, preferably a metal such as aluminum, and/or carbon may also be included.
