Abstract (en)
[origin: EP0141591A2] This invention provides a closure for closing the mouth of a container. The closure has a body part for engagement with the container and which is provided with a number of openings. The cap part is arranged to open and close the opening and is connected to the body part by a snap hinge. The body part and the cap part have cooperable tamper evident means which interengage when the cap part is first closed and prevents opening of the cap part until the cap part is released by tearing away or breaking the tamper evident means.
