Abstract (en)

The gearbox has a casing formed of a bottom part (302) and a top part (301) with a parting plane therebetween inclined downwardly from front to rear. At the front, an input, engine shaft (312) enters the casing and is coupled by bevel gears (311, 313) to the gearbox input shaft on a first shaft line (I). A change-speed gear is provided between the first shaft line and a second shaft line (II), both shaft lines lying in the parting plane. On the same, output shaft line (II) are disposed the half-shafts connected to wheels of the vehicle with a split differential between the gearbox output shaft and the half-shafts. A clutch (314) and spur gears (388, 389) at the front of the casing couple the engine shaft (312) to a power take-off shaft (390) situated below the shaft lines (I and II). The power take-off shaft extends through a hollow front wheel drive shaft which is coupled to an output gear by a bevel gear (391).
