Abstract (en)  
[origin: EP0142423A1] On the outside of a load-carrying framework (1) resting on a foundation slab is stretched a layer of fabric (2) held temporarily in tension by fastening members, the said fabric (2) being covered by panels (3) of insulating material anchored on the outside on rods (4) mounted on the framework (1), the said panels (3) being covered on their outer face with at least one layer of fabric (7), the said layers of fabric (2) and (7) being disposed outside and inside the insulating panels (3) then being adhesively bonded and the outer layer of fabric (7) and then being covered with a thin finishing-coat layer (8). The invention is used in the construction of buildings. <IMAGE>
