Abstract (en)

[origin: EP0142462A2] 1. Artificial sump in a water tank, comprising a flushing device (1) by means of which a cleaning surge of water (4) can be created, said surge accumulating in artificial sump (15) and flowing out through a drain (6) located within the artificial sump, characterized by skirt (5), resting on bottom (13) of the liquid containment (10, 12), forming a delimitation of artificial sump (15), and provided with a sloping through-shaped area (20) rising toward drain (6), and by skirt (5) partially or completely delimiting a chamber in which at least a portion of the water accumulated to produce the surge and the entrained dirt can be contained.
