Abstract (en)
[origin: EP0142688A2] It is described an improved refrigerating device for the keeping of foods, whose main characteristic consists in that it comprises means for the acquisition of external information (1, 11) by which it receives the data about the kinds of foods which are kept inside it, timers (31) measuring the passing of time, in particular starting from the date of keeping of food, means for processing information (30) processing the data received by the means for the acquisition of external information (1, 11) and those ones coming from the timers (31), and the means for the communication of information outward (33, 34), that according to the result of the data processed by the means for the elaboration of information (30) supply the user with information about the time for the keeping of foods and/or about their term.
