Abstract (en)

[origin: US4615494A] For the rotatable mounting of reels (15), especially in conjunction with packaging machines, there is a reel-receiving device, in which the reel (15) supported on a hub (11) is pressed against the reel (15) or against its (cardboard) core (16) by clamping claws (20) designed and actuated in a special way. The clamping claws (20) are preferably designed so that they partially press into the material of the core (16) and secure the latter positively against rotation.
