Abstract (en)

[origin: EP0143138A1] 1. A device for the automatic closure of rosette closures of boxes (1) with fingers (12) for bending the closing tabs (17) inwards, and with a ram for pressing down all the closing tabs in their stable closing position, characterized in that a finger (12) is associated to each closing tab (17) and in that all the fingers (12) are pivotably arranged at a carrier (8, 10, 11) movable only axially such that each finger is moved axially towards the box by a radial inwards movement.
