Abstract (en)
[origin: ES291667U] The low temperature storage of biological or pharmaceutical samples by means of ampullas in a low temperature container should be as compact and easy to handle as possible. For this purpose, cases are arranged in such a container into which boxes containing the ampullas can be placed. Each box has pins on the inside, the center distance of which is equal to the outside diameter of the ampullas and in which the minimum distance from any opposing side walls of the box is equal to the whole number multiple of the outside diameter of the ampullas.
