Abstract (en)
[origin: EP0143886A2] 1. Air humidifier with a case bottom for the absorption of the store water and a case top detachable on the case bottom, in which a blower and an evaporating body are placed at distance to the store water and at which store water can be delivered from the case bottom to the evaporating body via a pump piping, characterized in the way that the case bottom (1) exchangeably takes up a liquid-impermeable inset (9) made of thin, flexible material, which is permanently open at the case upper side and separably attached to the case bottom (1) with the lateral face (9') comprising the open-side of the inset.
