Abstract (en)
[origin: EP0143890A1] 1. A stamped knitting tool for stitch-forming textile machines, having an elongate shank arranged for longitudinally displaceable mounting in a corresponding guide passage of a knitting tool carrier, which shank is laterally defined by smooth flanks and is slightly bent or bendable to one side at least one predetermined point, the bending point lying on the bottom of a recess extending transversely of the longitudinal axis of the shank in the associated shank flank, characterised in that the recess (10) is filled with a vibration-damping material (16) which is firmly bonded to the shank (1).
