Abstract (en)

[origin: EP0143907A2] In order to produce a construction with a building member of cement-like material possessing a stressed reinforcement so as to be corrosion-proof and maintenance-free, easily mountable and mechanically highly loadable and with a ratio of cross-section and stability as favourable as possible, the building member is extruded from an asbestos cement mixture or a substitute for this material with the required longitudinal grooves and elongated holes and an otherwise smooth surface.
