Abstract (en)
[origin: US4577557A] Individual ink disk or roller elements (4) are located, axially positioned next to each other on a roller transfer structure; to provide for smooth operation of the ink train rollers (5'), the disks or roller elements of the ink roller structure are in continuous surface engagement with an ink-receiving roller (5) forming part of the roller train, and driven at machine speed, and selectively shiftable about its circumference, by deflection of individual angled levers (6) for selective engagement with the next upstream ink transfer roller, receiving ink from an ink supply roller, operating at a speed slow with respect to machine speed and the ink transfer roller (3).
