Abstract (en)

[origin: EP0144860A2] A ship's rudder carrying a propeller which constantly rotates with the main propeller. So that further energy can be saved for the auxiliary propeller drive, the course stability can be improved and the main rudder machine can be of smaller and less expensive construction, the propeller (3) of the active rudder is arranged in front of the leading edge of the main rudder (2), and the main rudder is provided with an end flap (4) which is adjusted in the same direction as the main rudder (2). <IMAGE>
