Abstract (en)

[origin: EP0144945A2] 1. Process and apparatus for discontinuously operating coke ovens with vertical chambers with indirect heating of coking chambers to produce a blast furnace coke from wet or preheated fine coal, characterized in that the well carbonized hot red coke cake from the coking chambers is lowered in vertical direction by the amount of its height and in that the chamber is recharged and the lowered coke cake is not moved during the next carbonization time and cooled only indirectly and discharges its heat completely to evaporator surfaces to generate high-pressure steam.
