Abstract (en)
An electrical vibrator-compression device comprising a coil and a magnet movable with respect to each other, one of these two components being coupled to a piston-like body which is movable in a cylinder. The second component, which is not coupled to the piston-like body, is connected by means of springs to a housing to which the cylinder is connected. When the device is in operation, vibrations will be suppressed in a manner such that the cylinder housing substantially does not vibrate.
