Abstract (en)

A wind-powered vehicle, such as a sailboard or a similar vehicle for use on land, snow or ice, having a generally flat body, a mast secured to the body by a universal joint and a sail carried by the mast, is provided with a foot-operated steering means. For example, the steering means may be a rotatably mounted fin (10), skeg (24, 37), wheel, castor, skate, ski, runner or skid and may be operated by a footplate (4, 12, 30) or foot lever. The footplate or foot lever may be linked to the steering means by, for example, a direct connection (7), a cable (15, 16) or a mechanical linkage (40).
