Abstract (en)

[origin: EP0146467A2] The termination 8a of the antenna 8 is engaged in a rapidly releasable manner into a tubular sleeve 3 mounted rotatably on a base 1a-1b attached to the bodywork; the sleeve 3 is a moulded part, preferably metallic, on which is engaged a hollow end-piece, 6, in such a way as to be able easily to separate 3 and 6 from one another. The invention applies in particular to the attaching of the roof antennas on motor vehicles.
