Abstract (en)
[origin: EP0146907A2] To obtain a single-phase mixture of carburettor fuel and water-containing alcohol, a solubiliser is proposed which contains about 5 - 40% by volume of a substance from the group of the C4- and C5-methyl ketones, 20 - 60% by volume of a substance from the group of the C3- to C5- and preferably C4-alcohols and 20 - 40% by volume of a glycol and also, if necessary, additionally about 2 - 8% by volume of a nonionic emulsifier and, as a further addition, if necessary, a non-self-emulsifying glycerol monodioleate.
