Abstract (en)

[origin: EP0147308A2] The invention relates to a support (25, 28) intended to support and lock, at least transversely, polygonal panels assembled edge to edge in order to form dismountable floorings, for example for a stage, etc., comprising a prism-shaped head (1) possessing several faces (9) to be approximately vertical in a use position, at least one support and locking finger (2) intended to be fixed, with the aid of fixing means, on the said head, and reception means (10) provided on each face of the head and arranged for receiving and locking in the correct operating position, in cooperation with the abovementioned fixing means, a finger such that, in a use position of the support, this finger extends approximately vertically and projects in a manner laterally offset beyond the head, by virtue of which a single support can be arranged at the juxtaposition point of several panels (3) to support and lock by itself the adjacent corners of the juxtaposed panels. <IMAGE>
