Abstract (en)

[origin: EP0147725A2] The packaging cup has a dispensing opening (1) which is sealed off by a tear-open tab (2) whose one end (3) is connected to a grip element and whose other end (4) is arranged in a moulded-on pouring spout (6). The tear-open tab is delimited by thinner areas (11) of the cup material. The pouring spout is attached to the step (9) of the cup. Formed on opposite this, likewise on the step (9), is a projection (10) which can be used as a grip. The cups are filled via the bottom and can therefore be stacked before filling. The bottom is sealed off with a base part intended for this purpose. The tear-open tab (2) is surrounded by a bead (8). <IMAGE>
