Abstract (en)

[origin: EP0148153A2] The bag is produced from a material part (1) by folding together, the edge parts of the bag side (4, 5) being connected firmly to one another by heat sealing. The coating of the material part (1) with the thermoplastic adhesive is preferably effected partially, i.e. on the edge parts of the bag. By virtue of the fact that the material part (1) is a woven material, the bag is more liquid-permeable than the known bags. <IMAGE>
