Abstract (en)
[origin: EP0148165A2] A post for an earring or like article includes a pivoted retainer member which is mounted on one side of the post for rotation about an axis transverse to the post, the retainer member and post including abutments for aligning the retainer member with the post. The method of manufacture comprises forming the post and the retainer member, perforating one of those members, and cold working the other member to cause it to extrude into and through the perforation and form the required pivot pin.
