Abstract (en)  
[origin: WO8500153A1] A thermoplastic closure consisting of a circular top wall (1) and an internally threaded skirt (2, 3) with an annular inwardly directed protrusion (15) extending from the inner wall of the skirt (2) below the intersection (7) of the skirt (2) with the closure top wall (1). The protrusion (15) is adapted to receive a flowed in gasket (8) and as the closure is screwed into place on a container (4) to urge the gasket (8) against the outside of the container neck (16) to thereby effect a side seal in this area (16). A method of flowing a gasket into a closure shell by injecting a metered amount of EVA through a nozzle into the shell while spinning the shell is also disclosed.
