Abstract (en)

[origin: WO8404548A1] A process for producing steel strip electroplated with zinc on both sides by two plating steps between which is provided a wetting step. A wetting solution to be used in the wetting step is controlled so that its zinc concentration falls within the range of from 0.1 to 50 g/liter, whereby deterioration of the plated surface due to a decrease in the zinc-plating degree is avoided.
