Abstract (en)

[origin: EP0148416A2] A flame retardant polymer mixture for the sheathing of cables and wires comprises copolymers of ethylenevinyl acetate and ethylene-butyl acrylate, grafted with organosilane for cross-linking, a cross-linking catalyst, 3 to 15% by weight of ethylene-vinyl acetate containing 50% vinyl acetate, and 21 to 32% by weight of aluminium hydroxide. The presence of the second ethylene-vinyl acetate copolymer enables an increased amount of aluminium hydroxide to be incorporated in the mixture, thereby improving both flame retardancy and flexibility.
