Abstract (en)
[origin: WO8500156A1] A container (10), for dispensing pills, powders etc., comprising a body (11) and a lid (12) formed of a resilient material; said lid (12) is rotatably mounted on the body with its inside surface in juxtaposition with an end of the body; said end being of an annular shape and surrounded on its outer periphery by an outer side wall (15) and on its inner periphery by an inner side wall (14); at least one aperture being formed in the said end; said lid (12) shaped to closely correspond to the said end of the body and formed with at least one aperture which may be moved into and out of register with the aperture(s) on the end of the body (11); said container (10) is characterised in that the inner and outer side walls (14, 15) of the body (11) and the lid (12) are formed with cooperating arcuate inclined surfaces (18, 19) such that the end of the body (11) and the lid (12) are drawn into close juxtaposition by the action of the inclined surfaces.
