Abstract (en)
[origin: US4615185A] The bracelet clasp comprises a sleeve attached to one of the bracelet tongues. The sleeve includes transversal teeth on a part of the sleeve wall contiguous to the wrist. Such teeth cooperate with complementary teeth arranged on the other tongue of the bracelet. The sleeve is elastically deformable in the transversal sense in order to allow disengagement of the meshing teeth and thereby opening of the bracelet. Such a bracelet may be formed as a single piece from a plastic material such as polyurethane.
