Abstract (en)

[origin: WO8500560A1] A flexible low-adhesion carrier web (12) has a coating (14) in the form of graphics including a matrix resin, a binderresin, and a light-altering agent such as a pigment. When the coating is wet with a transfer fluid such as mineral spirits, this activates the binder resin to permit the graphics to be transferred to a display surface (20) such as a glass window.
